### **Featured Topic: *From Hurricane to Climate Change***

Staff from Franklin Pierce University's Monadnock Institute of Nature, Place and Culture will present a showing of their recently released film entitled *From Hurricane to Climate Change*. The film is a collaborative effort between the University Institute, area residents, officials, business owners and nonprofit organizations, as well as regional and national subject experts and documents how the greater Monadnock region is addressing the challenges of an increasingly unstable climate.

The film opens with rare footage of the Hurricane of 1938 impacting New England and communities such as Peterborough, and traces the increase in extreme precipitation events like the Alstead flood of 2005. A focus of the film is the City of Keene, which has experienced repeated flooding events and has been judged a "shining example of climate preparedness and adaptation."

There will be a panel discussion following the film as well as a question and answer period.
